“Where I think finance can deliver a ton of value is explaining the ‘why’... I love where finance sits in the organization because it gives us access to both operational and financial data. We also have the analytical skills to pull apart that kind of data and draw insight from it.”

Revenue Metrics

Annual Recurring Revenue (ARR)

Total Revenue of Yearly Subscriptions

+

Total Expansion Revenue

−

Total Contraction Revenue

Definition

The sum of all revenue expected from customer contracts over the course of the next 12 months. This includes customer contracts that last one year or longer as well as annualized versions of shorter contracts.

Quick Tip

Compare to revenue run rate to better understand the sustainability of SaaS revenue recognition.

Revenue Run Rate

Revenue in Period

×

Number of Periods in a Year

Definition

A projection of your annual revenue based on recognized revenue for a given period.

Quick Tip

Revenue run rate is calculated based on recognized revenue in your ERP. Get a more granular understanding with effective bookings to revenue and bookings to cash waterfalls.

New ARR

+

Expansion ARR

)

/

(

Lost ARR

+

Churn ARR

)

Definition

A simple financial efficiency metric that compares ARR growth to ARR churn and contraction.

Quick Tip

Use the SaaS quick ratio as an at-a-glance way to understanding sustainable growth. Remember that just because you have a high quick ratio doesn't necessarily mean you're growing sustainably.

ARR per Head

Total Revenue

/

Number of Full-Time Employees

Definition

Also known as revenue per employee, this metric tells you how much ARR you earn on average for every full-time employee in the company.

Quick Tip

Make sure benchmarks for this metric align with your industry and company size. Some businesses are more headcount-intensive than others. Regardless, this is an effective growth efficiency metric

Acquisition Metrics

SaaS Magic Number

(

Current Quarter ARR

—

Prior Quarter ARR

)

/

Prior Quarter Acquisition Cost

| | | |
|---|---|---|
| Definition A common sales efficiency metric that asks: “For every dollar spent on acquiring new customers through sales and marketing, how many dollars worth of revenue do we create for the company?” | Quick Tip Magic number is especially important for earlier-stage SaaS companies. As you gear up for new funding rounds, put this metric in context with others like CAC ratio and LTV to better explain customer acquisition spend and returns. | Resources <ul style="list-style-type: none">Overview articleHow to figure out how much to spend on adsSales performance and efficiency metrics |
|---|---|---|

Customer Acquisition Cost (CAC)

Current Period Total Acquisition Cost

/

Current Period New Customers Acquired

| | | |
|--|---|--|
| Definition The average amount of money you spend to acquire a single new customer. | Quick Tip Make sure you align CAC calculations with your sales cycle. If you’re calculating CAC on a one-month time period but your sales cycle is 50-60 days, you’re not fully burdening your CAC. | Resources <ul style="list-style-type: none">Overview articlePodcast episode: CAC Masterclass with Ben Murray |

CAC Payback Period

Customer Acquisition Cost

/

(

ARR

—

Average Cost of Service

)

| | | |
|---|--|---|
| Definition The average amount of time it takes to recover acquisition costs per customer. | Quick Tip Don't be rigid with your CAC payback calculations. They may change as your company matures. Early on, 100% of sales and marketing may go to new customer acquisition. But as you mature, you can split CAC into different segments and calculate payback for different ICPs. | Resources <ul style="list-style-type: none">Overview articlePodcast episode: SaaS pitch decks with John Luttig, Founders Fund |

CAC Ratio

Total Acquisition Cost

/

New & Upsell ARR

| | | |
|--|---|--|
| Definition An efficiency ratio for the cost to acquire annual recurring revenue. | Quick Tip Blended CAC ratio is the most common form of this metric because it combines all sales and marketing expenses. If you have a good chart of accounts, you can get more granular and calculate new business or expansion CAC ratio. | Resources <ul style="list-style-type: none">Podcast episode: CAC Masterclass with Ben MurrayKeys to the best chart of accounts structure |

LTV:CAC Ratio

(

Average ARR per Customer

/

Churn %

)

/

(

Total Acquisition Spend

/

Current Period New Customers Acquired

)

| | | |
|---|--|---|
| Definition An acquisition efficiency ratio that compares the average lifetime value of your customer base to the average cost to acquire those customers. | Quick Tip LTV:CAC miscalculations are common because of all the variables and volatile factors involved. Lack of fully-burdened CAC calculations, churn fluctuations, and misunderstandings of LTV can cause misleading LTV:CAC numbers. Always put this metric in context with other acquisition metrics. | Resources <ul style="list-style-type: none">Overview articlePodcast episode: CAC Masterclass with Ben MurrayCritical SaaS financial metrics to track |

Company-Wide Efficiency Metrics

Burn Multiple

Net Burn

/

Net New ARR

| | | |
|--|--|---|
| Definition A capital efficiency metric that shows how much cash you’re spending per incremental unit of revenue generated in a given period. | Quick Tip Burn multiple benchmarks depend heavily on business maturity. Earlier-stage startups expect to have higher burn multiples as they spend to grow, whereas more mature VC-backed orgs should be working toward zero. | Resources <ul style="list-style-type: none">Overview articlePodcast episode: Cash flow managementRelevant operational efficiency metrics for context |

Cash on Balance Sheet

)

| | | |
|---|--|---|
| Definition An efficiency metric that measures the return on deployed capital. It shows the total amount of ARR generated from all the cash spent to date. | Quick Tip This metric was coined by Bessemer Ventures to evaluate a potential portfolio company's future success. It's directionally useful (especially if you're looking for funding), but be sure to contextualize it with operational efficiency metrics. | Resources <ul style="list-style-type: none">Overview articleWebinar: Tips for navigating a down marketing with XYZ and LegionGuide to cash flow analysis |

Net Burn

Cash Flow from Operations

—

Bank Transfers

—

Financing Transactions

—

Intercompany Activity

| | | |
|---|--|---|
| Definition Also called cash burn rate, this metric tracks the rate at which you use up cash reserves. | Quick Tip Burn rate is a critical component of your company's story. But this metric doesn't help explain the “why” behind financial performance. Get more out of investor meetings by adding context with insight into cash inflows and outflows. | Resources <ul style="list-style-type: none">Overview articleCash flow forecasting guide |

Runway

Total Cash on Hand

/

Net Burn (3-Month Average)

| | | |
|---|--|--|
| Definition The amount of time, in months, before your company runs out of cash. | Quick Tip When trying to extend runway, break expenses into three categories — forecasted spend, discretionary spend, and variable spend. Sift through and find opportunities with large savings and low impact to operations. | Resources <ul style="list-style-type: none">How finance can guide companies through a down marketGuide to financial planning |

Rule of 40

Revenue Growth Rate %

+

Profit Margin %

| | | |
|--|--|---|
| Definition An efficiency ratio that balances revenue growth and profitability to highlight the sustainability of an org. | Quick Tip Accurate Rule of 40 calculations depend on using the right inputs. For most SaaS companies, recurring revenue growth and EBITDA are good inputs. But if you have a large professional services component, you may want to use total revenue as the growth input. | Resources <ul style="list-style-type: none">Overview article |

Sales Performance Metrics

Sales Rep Ramp

N/A

| | | |
|--|---|--|
| Definition The average amount of time it takes for a new sales rep to reach full productivity. | Quick Tip Don't make quick assumptions about sales ramp rates. Combine CRM and HRIS data to normalize AE start dates to time zero and look at the inflection point when reps start hitting full productivity. | Resources <ul style="list-style-type: none">Overview articleSales capacity planning guide and template |

Annual Contract Value

Total Contract Value

/

Total Years in Contract

| | | |
|---|--|---|
| Definition A metric that normalizes the total value of a contract to show the average revenue it delivers per year. | Quick Tip Use ACV as a historical value to benchmark new contracts. This metric can help sales leaders set discounting thresholds and do cost-benefit analyses for negotiations. | Resources <ul style="list-style-type: none">Overview article |
|---|--|---|

Average Sales Cycle

Total Days in Pipeline for Closed Deals

/

Number of Closed Deals

| | | |
|--|--|---|
| Definition The average time it takes a prospect to close after entering your sales pipeline. You can calculate it for closed-won deals alone or for both won and lost deals. | Quick Tip Avoid getting overly invested in industry benchmarks for sales cycles. This metric is highly sensitive to your unique business model. Pricing strategy, in particular, will drastically impact sales cycles. | Resources <ul style="list-style-type: none">Overview articleSaaS pricing strategy guide |

Deal Conversion Rates

Closed-Won Deals

/

Total Closed Opportunities

| | | |
|--|--|--|
| Definition The percentage of opportunities that convert to customers compared to the total number of closed opportunities in a period. | Quick Tip For high-growth companies, high deal conversion rates could point to opportunity. If you're winning a larger-than-expected portion of deals, consider widening your ICP. This can help show that you're able to capture more of your total addressable market. | Resources <ul style="list-style-type: none">Leveraging closed-won and closed-lost dataKey sales pipeline metrics |

Sales Cycle

| | | |
|---|--|---|
| Definition The speed with which a prospect moves through the sales pipeline and generates revenue, measured in revenue per day. | Quick Tip This metric can add important context to hiring decisions. It helps you set more realistic quotas for incoming sales reps. And it informs conversations with customer success about how many reps will be needed to support incoming customers. Retention Metrics

Net Dollar Retention

(

Starting ARR

+

Change in ARR

)

/

Starting ARR

| | | |
|---|---|--|
| Definition A ratio comparing the revenue earned from customers in the given period to the revenue earned when a customer initially signed a contract. | Quick Tip Think about net dollar retention as your ability to build momentum for revenue growth from your existing customer base. Build your pricing strategy to have flexible levers for increasing revenue retention over time. | Resources <ul style="list-style-type: none">Overview articleGuide to customer retention analysis |

Gross Dollar Retention

(

Starting ARR

−

Churn ARR

−

Downgrade ARR

)

/

Starting ARR

| | | |
|--|--|---|
| Definition A measure of the percentage of existing revenue your company retains in a given period. | Quick Tip Use gross revenue retention as the more conservative version of net revenue retention. Instead of balancing lost revenue with gains from upgrades and expansion, gross revenue retention more closely aligns the performance of your customer success team in retaining customers. | Resources <ul style="list-style-type: none">Overview article |

Logo Retention

(

Total Customers (End of Period)

−

Total New Customers

)

/

Total Customers (Start of Period)

| | | |
|---|--|--|
| Definition The percentage of customers (logos) your business retains over a given period. | Quick Tip Logo retention may be directionally useful for customer health, but it shouldn't be a North Star. The complexity of SaaS business models and go-to-market motions make it difficult to follow generic logo retention benchmarks. | Resources <ul style="list-style-type: none">Overview articleEssential customer retention metrics in SaaS |

Customer Count / Customer Changes

N/A

| | | |
|---|--|---|
| Definition The total number of customers your company has in a given period and an overview of how the customer base has increased/decreased over time. | Quick Tip Use trends in customer changes as a basis for financial assumptions in your top-line models. The more data-driven you can make your new customer assumptions, the more accurate your top-line plans will be. | Resources <ul style="list-style-type: none">Webinar: SaaS revenue planningARR snowball model guide and template |

Customer Lifetime Value

Average ARR Per Customer

/

Churn Rate

| | | |
|---|---|---|
| Definition The average amount of revenue you expect to receive from a customer over the course of their entire relationship with your business. | Quick Tip Finance's ability to influence strategic decisions that would increase LTV relies on storytelling. If you can focus on the “why” behind the numbers, you'll be able to make a more compelling case to increase prices, add new escalation clauses to contracts, or add more heads to the CS team. | Resources <ul style="list-style-type: none">Overview Article |
